

CONVEYOR BELT & SYSTEM REPORT

CONVEYOR BELTS FOR GODFREY PHILLIPS & AN INCLINED CONVEYOR SYSTEM TOO

We supplied all PU belts for their completely new plant. We took up a challenge for an improved design and manufactured an inclined troughed Conveyor system. A similar existing conveyor system had 2 HP motor + gearbox with a heavy structure and a platform for the motor assembly. We offered a system with a just ½ HP motor with 2 stage toothed belt drive—without any platform and mounted the complete motor and drive assembly on the conveyor legs. System weight was less than 50%. We kept watch on the complete system for more than 3 years and all toothed belts and also trough belts 2T12 UO-U2 W FDA have been performing without any problem.

WE WERE TOLD BY THEIR ENGINEERS IT WAS A WONDERFUL JOB & THE NEW SYSTEM CONCEPT WAS A QUITE PLEASANT SURPRISE TO THEM.
